Introduction

EverGrow, launched in September 2021, quickly became the fastest-growing cryptocurrency of its kind. Initially rewarding holders in Binance USD (\$BUSD), a regulated stable-coin pegged 1:1 with the US dollar, EverGrow has now shifted its focus to a cutting-edge staking model. This significant evolution in our platform strategy underscores our commitment to innovation and long-term value for our holders.

Built on the Binance Smart Chain, EverGrow offers impressive efficiency with up to 10x faster block speeds and lower gas fees compared to many competitors. Alongside its robust features, EverGrow introduces a sophisticated staking mechanism as the new method of rewarding its holders, enhancing the potential for sustainable investment returns.

Operating with an anti-Whale system, EverGrow limits any sell amount to a maximum of 0.125% of the circulating supply, fostering a more stable and inclusive investment environment. Transitioning from our successful Yield Generation token system, which distributed over \$39 Million in \$BUSD to holders, to this staking model, EverGrow continues to set new standards in DeFi Tokenomics with this game-changing strategy. Designed for long-term holding, our staking model provides opportunities for passive income and capital growth, allowing investors to benefit from a more stable reward system in various market conditions.

The EverGrow Protocol

EverGrow, a leading rewards token on the Binance Smart Chain (BSC), has implemented a 2% tax on all transactions (BUYS, SELLS, TRANSFERS), focusing on sustainable rewards and real value creation via our utilities.

The total supply of EverGrow is 1,000,000,000,000,000 \$EGC. Initially, 50% of the tokens were sent to a burn address, with ongoing burns supported by our ecosystem token, Lucro. The 2% tax, collected in BNB, is split equally: half for Marketing, Development, and Operations, and the other half for our Staking Contract.

The Technology Behind EverGrow: Binance Chain

Binance Smart Chain (BSC) was created to enable the use of solidity-based smart contracts at a significantly faster and more efficient rate than other competing chains.

With decentralized exchanges on BSC providing lightning-fast transactions and ultra low costs, BSC has established itself as one of the world's leading blockchains for Decentralized Finance (DeFi). BSC makes use of BEP-20 token technology, a proprietary blockchain that ensures the security and privacy of all users and developers. Its inherent dual-chain interoperability enables cross chain communication and scalability of high performance, decentralized applications (dApps) that lead to a quick and fluid user experience. It is EVM compatible and will support all current Ethereum tools, with faster and more affordable transactions. Based on the Proof of Stake consensus, its on-chain governance allows decentralization and substantial community participation via the use of 21 validators that verify transactions.

SMART CHAIN

Ecosystem/Roadmap

EverGrow is creating an ecosystem of utilities designed to generate additional sources of passive income for holders. The net-profits from all these utilities will be used for our BuyBack & Burn function, creating green candles and \$BUSD rewards for holders.

Lucro Token

Lucro launched on September 15th 2022 on the Binance Chain. Lucro is a BEP-20 Ecosystem Token designed for high daily volume, with a 1% tax (.8% to EverGrow's BBB & .2% to Lucro's LP). Lucro is being integrated into a suite of utilities via partnerships with both crypto and traditional companies. Lucro White Paper. [LUCRO White Paper](#)

LunaSky NFT Marketplace

Mint, Buy and Sell NFTs across multiple blockchains. Users will also have the ability to use Lucro to Mint, Buy and Sell NFTs at a discounted fee rate. The marketplace will include a minting tool that will let users create their own NFTs from images, videos & other data.

Atlas Wallet

Buy, Sell and Swap your crypto on a wallet that is easy-to-use, ultra-secure and packed with a suite of essential & advanced features. Atlas is multi-chain, allowing you to hold tokens on Ethereum, Binance Smart Chain, Bitcoin, Solana, Cardano, Polygon, Cronos & Avalanche C Chain. Atlas Wallet Website. [Atlas Wallet Website](#)

Staking

Staking offers EverGrow holders a way of putting their tokens to work and earning passive income without needing to sell them.

EverGrow MetaVerse

In partnership with Objective Reality, A virtual world that brings together the entire EverGrow Ecosystem. Browse LunaSky NFTs in a fully-immersive 3D gallery, play VR games, or shop in virtual stores with your crypto wallet.

EverGrow Team

A talented group of experienced business leaders, developers and marketing specialists, the team is overseen by Sam Kelly, an award-winning investment manager and entrepreneur whose expertise and experience spans over 20 years in business. Paul Treffinger oversees day to day operations alongside Project Manager Cody Black and Technical Manager Emmanuel Padilla. Original Core Team members, Praveen, Jacob and Ajeet offer ongoing consultation and advice, and our 75 person community team provide support and education to our 140,000 holders worldwide.

The Evolution of Passive Income

EverGrow's staking model introduces a flexible and dynamic approach to passive income. Your rewards are initially generated from every Buy, Sell, or Transfer of EverGrow Token (\$EGC), based on the amount of \$EGC you hold and choose to stake. This method not only aligns with the current trends in crypto but also paves the way for additional income streams once our suite of revenue-generating utilities is launched.
